Engineering Our Future

Ensure early, regular, and consistent private sector input into public procurement processes.

Taxpayers expect the province to seek the best value possible when engaging professional engineering services. While ACEC-SK applauds the Saskatchewan government for moving to a best value framework to buy goods and services through adopting appropriate procurement policies and philosophies, a “one size fits all” implementation approach will not achieve best value.

For example, there are specific criteria that must be considered to achieve the best possible outcome when engaging professional services. In fact, each supplier in the supply chain will have its own unique set of factors that must be considered when developing sector-specific procurement processes.

Who else is better equipped to help government understand these unique differences than those representing various industries? Therefore, ACEC-SK endorses *early, regular, and consistent communication between various private sector industry representatives and the government’s procurement body when developing sector-specific procurement processes*. Only industry knows best what nuanced factors to consider for achieving the most effective procurements possible in their sector for Saskatchewan taxpayers.

Get Involved

ACEC-SK is a strong voice for Saskatchewan’s consulting engineering industry – but we need your help to amplify it and make our message heard loud and clear. It’s easy to join our efforts:

- Send a letter to the candidates running in your riding from a link on this [ACEC-SK webpage](#).
- Share our election priorities through your social media networks using #EngineeringOurEconomy
- Attend candidate debates and speak up on behalf of our industry by raising the importance of infrastructure investment done the right way.
- Follow ACEC-SK on Twitter, Facebook and LinkedIn to learn more about our election campaign activities and successes.

With your support, the voice of our industry will be heard during this election campaign. Together, we can make a difference in how the next government collaborates with the private sector to implement strategic infrastructure investments. Let’s make this election about #EngineeringOurEconomy
